

ADVANTAGES OVER TRADITIONAL BANKING

Advantages over traditional banking

Doing traditional money transfers while using a bank account is the most common way in transferring money today. But when you want to move a large amount of money (ex, \$10,000) then here is where the problems come. Bank monotonize all their transactions and when doing such a transaction, Your transfer will get blocked and will only continue when you have a call with the bank and explain to them where the transaction is for, where the money came from, and you need to talk about your transfer, meanwhile your money is still stuck in the system. This is the power of centralization. It gives banks too much power over their own customers

Say goodbye to Money delays

The worst thing that can happen with banking are delays. When you do a transfer in the weekend or on holidays, your money will get delayed. Pulsechain Cash solves this because of the underlying blockchain technology (pulsechain). Transactions will always be fast and delays doesn't exist. So if you hate money delays, and you will never experience one anymore, Then Pulsechain Cash could be the right choice for you. Doing a transaction takes only up to 10 seconds. A speed a traditional bank transfer will never achieve.

No more Extra cost for sending money to another country

If you ever have to try to send money to another country, then the bank probably have you ask for giving them more money for the transfer. The reason you have to pay extra is that you have to deal with different factors such as: Transfer Fees, Exchange Rate Margins, Receiver-side Receiving Fees, Additional Fees for Express Transfers and Bank Fees at Correspondent Banks. Pulsechain Cash eliminate all those factors what makes it superior to fiat currency. You only pay for gas fees (which cost on an average only \$0.06) There will never be extra charges or other fees for doing an international transaction.

Extra Privacy

The problems with bank is that they are all too centralized. In some cases, they will block your transaction because it was looking suspicious to them. Not only they monotonize their transaction, but they can also block customers for accessing their account without giving any reason. With Pulsechain Cash, you not have worried about such things because the only one that is operating during a transfer is you and the network. There is no any third parties or middlemen for blocking your transfer, so this make Pulsechain Cash a better alternative.
